In the lab you just completed, you created a project called myproject and an app called myapp. Complete the following sentence.
True or False. You must first create a project in Django to add an app.

- ⦿ True

- ○ False

⊘ Correct
Correct. In Django, a project contains all the application parts you want to build. The project must include at least one app representing a sub-module of the project.

2.True or false. After completing all the tasks in this lab, Django set up a default directory structure with a primary folder named myproject. Inside this, there are two sub-folders: one named myproject and the other named myapp.

- ⦿ True

- ○ False

⊘ Correct
Correct! The project structure can be changed with some settings. Still, by default, a directory with the project name for the overall structure consists of another directory with the project name and an app directory.

3.In the lab you just completed, you created a project called myproject and an app called myapp. Complete the following sentence.
After running a command to create the project, to create the app, you must

- ⦿ Step inside the myproject directory you have created, and run the command to create the app.

- ○ Step outside to the working directory that you had initially created and run the command to create the app.

- ○ Stay in the same directory and run the command to create the app.

- ○ Create a directory called myapp and step inside it.

⊘ Correct
Correct! When you run the command to create the project, Django automatically creates the myproject directory. You must step inside this directory and run the command to create the app.
